

SOFTWARE · PROGRAM · STANDARD

The 38x Plan

Any musician. Any body. Any input. Any tool. How Limitless Sound grows from six free apps into a movement the whole music industry builds in.

Prepared for Bennet
Limitless Sound × Panda Studios

FREE · OPEN · MAC + WINDOWS

00 THE BIG IDEA

Three things at once. Each one feeds the others.

Limitless Sound becomes **free software that works today**, **a program that puts disabled musicians at the center**, and **an open standard** that makes the whole music industry build accessibility in.

01

The software

Six apps and a hub, joined so any input (voice, eyes, one hand, a switch, the Xbox Adaptive Controller) can trigger any action. Public, free, and installs on any Mac or Windows computer.

EXISTS TODAY

02

The program

Real sessions with real artists: interviews that shape the tools, a “Pimp My Ride” rig build for one or two artists, and a guest-feature song series recorded at Panda Studios.

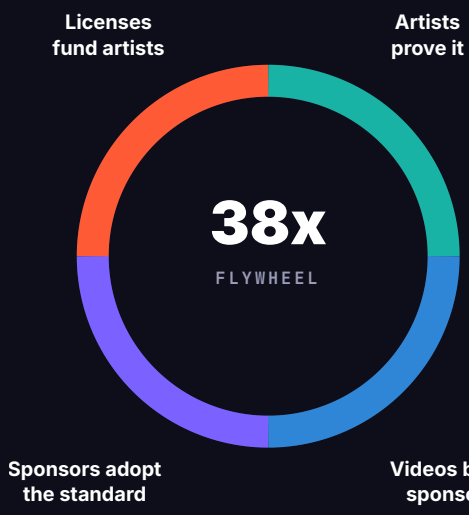

STARTS THIS MONTH

03

The standard

The 38x move: a “MIDI for accessibility” any manufacturer can adopt, test against, and badge. Licensing funds the mission, and part of every license goes back to disabled musicians.

DRAFT 0.1 WRITTEN

Why it compounds

The artists prove the software on camera. The videos bring sponsors. The sponsors’ products become the first ones to carry the standard. A share of every license flows back to the artists, who bring the next musician in. Every turn of the wheel makes the next one easier.

01 MUSICIAN OUTREACH AND INTERVIEWS

Every feature traces back to a real person's words.

One recorded interview with a disabled musician **every two weeks**, starting with Jason Becker.

WHO	Musicians across disabilities: ALS and motor loss (eyes or head only), amputation, one-handed players, low vision and colorblindness, Deaf and hard of hearing, chronic pain and fatigue.
CADENCE	Every two weeks, 45 minutes, remote or at Panda Studios.
INTERVIEW KIT	The same 12 questions each time: their rig, what blocks them, workarounds they invented, what they'd build, which brands they use. Ends with a 10-minute hands-on try of the matching Limitless app.
CONSENT	Written release before recording. They approve any clip before it's published and can pull it later. A paid appearance fee whenever there's a sponsor.
WHERE IT GOES	A public "what we heard" log, one GitHub issue per request (tagged with the interview), and a short clip for the video series.
MEASURE	Musicians interviewed, requests shipped, and how many keep using the apps 30 days later.

The first five to approach

1. Jason Becker
2. Andrew, The Ghost Inside
3. The guitarist who plays with his feet
4. A Deaf producer
5. A colorblind mixing engineer

Bennet already has the Jason Becker plan. It slots in as interview one.

02 THE PIMP MY RIDE PILOT

One complete rig for Jason Becker, filmed as episode one.

Paid for by gear companies in exchange for the story. Jason already has an eye-communication setup, but it isn't part of the Limitless ecosystem. **The pilot connects his eyes to everything.**

GazeStage plays and records in Pro Tools, the hub links it to Voice and Zoom, and an XY tone pad lets him shape a guitar tone hands-free.

THE DOOR IN: KIESEL

Kiesel builds Jason's signature guitar. **Brandon**, an old friend of Bennet's from the gold-necklace band, is A&R at Kiesel. One warm intro from Brandon puts Limitless in front of the company already tied to Jason's sound.

1. **Bennet messages Brandon**
   with the one-page pitch and a 60-second demo video (GazeStage plus the hub, recorded at Panda Studios).
2. **Kiesel joins as the first partner**
   covering or co-funding travel and the guitar side of the rig, and gets the first episode.
3. **Two more sponsors fill the rig**
   one for amp and tone (Line 6 or Marshall), one for the DAW and interface.
4. **Visit Jason's family**
   to fit the rig, record a short piece together, and capture it on video.
5. **Release it as episode one**
   then repeat with a second artist. Andrew from The Ghost Inside is the natural pick.

Who pays

Sponsors
Travel, gear and filming. Budget to confirm: travel, a two-day film crew, and the hardware.

Limitless
All the software, at no charge.

The artist
Pays nothing and keeps the rig.

03 GUEST-FEATURE SONG SERIES

One song. Six guests. Months of video.

Recorded at Panda Studios, where **every part is played by a disabled musician** using Limitless tools, one guest per episode.

01

Jason Becker
Writes the melody and guitar tone with his eyes.

`GazeStage · XY tone pad · Hub`

02

Andrew, The Ghost Inside
Drums.

`Control (pedals, switches) · One-Hand`

03

The guitarist who plays with his feet
Lead guitar over the track.

`Control · Zoom`

04

A Deaf or hard-of-hearing producer
Arrangement and mix.

`Zoom · Color · Visual meters`

05

A vocalist with limited mobility
Vocals, running the session hands-free.

`Voice (take mode)`

06

Everyone
Final mix and release.

`The whole suite`

~30

pieces of content from one song. Each episode yields one long-form session video, three or four short clips (the moment a tool clicks), and one tutorial so viewers can set up the same tools at home. Each episode can carry its own sponsor.

Panda Studios hosts and produces. Limitless provides the tools and the outreach. The guests are paid and credited as co-writers on the finished song.

04 SPONSOR MAP

A product demo, not a donation.

Pitch each brand **one series that shows its own product made accessible.**

BRAND	SERIES THEY SPONSOR	WHAT THEY GET	WHY IT FITS
Kiesel	The Pimp My Ride pilot	Episode one: Jason Becker on camera with his signature guitar	Already makes Jason's guitar; warm intro through Brandon
Line 6	Accessible tone: XY control of Helix	Helix played by eyes and switches; first product to carry the standard	Helix already takes MIDI control, so the XY pad drives it today
Marshall	The reamping series	Amps in every guitar episode; reamping tutorials	Reamping lets a player perform once and shape tone later, at their own pace
DW	The drum series with Andrew	Kit and hardware in the drum episodes	Adapted pedals and triggers are a natural DW story
Avid or Apple	Hands-free sessions	Pro Tools or Logic run by voice, eyes and switches	The suite already drives both
Microsoft	Controller as an instrument	The Xbox Adaptive Controller as a DAW surface	Limitless Control is built around it

THE PITCH IN ONE LINE

"Your gear, played by musicians nobody designed it for, on camera, and a badge that says you built it in."

05 THE LIMITLESS ACCESS STANDARD

MIDI for accessibility.

MIDI let any keyboard play any synth. This lets any body play any instrument: an open, free spec any instrument, plug-in or app can implement, so **any input a disabled musician can use can drive it**, plus a mark earned by passing a public test kit.

LEVEL 1

Connected

Announces its actions and takes them from any input over the open protocol. Answers within 3 seconds.

TESTED BY THE KIT

LEVEL 2

Adaptive

Also honors the musician's shared settings: text size, high contrast, reduced motion, dwell time, one voice for speech.

TESTED BY THE KIT

LEVEL 3

Hands-free

Also does its core job start to finish with no hands: eyes, voice or one switch. Helix tone shaped with an XY pad and gaze.

ATTESTED, WITH VIDEO

LEVEL 4

Co-designed

Also tested on camera with disabled musicians from the outreach program, paid for their time, feedback answered in public.

ATTESTED, WITH SESSIONS

How it's governed and funded

- **Free and open forever.** The spec, test kit and reference code cost nothing to implement.
- **Only the mark is licensed.** A yearly fee scaled to company size. Independent makers and nonprofits pay nothing.
- **10% goes straight to disabled musicians:** gear grants, paid studio time, and paid testing seats.
- **Proof stays public.** Every certified product's report is published, and anyone can flag a product for re-testing.
- **Run by the people it serves.** A council with a majority of disabled musicians decides changes.

ALREADY BUILT

Draft 0.1 of the standard and its test kit are written and tested in the Limitless Sound repository. A maker runs one command and gets a pass or fail per level:

```
python3 las_check.py --tool myamp \
    --try-all --level adaptive

PASS  C1  Connects and says hello
PASS  C2  Announces its actions
PASS  A1  Applies a settings change
...
myamp meets level 2, Adaptive.
```

An ethical, community mark written with disabled musicians. It is not a legal accessibility certification and does not claim compliance with the ADA, Section 508, the European Accessibility Act or any other law.

06 NEXT 30 DAYS

From idea to real in a month.

Three things make it real: **the Mac download ships**, **Brandon gets the Kiesel pitch**, and **the first interview is recorded.**

Week 1 — SHIP

- Publish Limitless Sound 0.1.0, the one-click Mac download for the whole suite — CLAUDE
- Build the XY tone pad in GazeStage: eyes, head or switch, sending MIDI CC to Helix or any plug-in — CLAUDE
- Record a 60-second demo at Panda Studios: eyes play a part, the XY pad shapes a tone — BENNET

Week 2 — PITCH

- Send Brandon at Kiesel the one-page pitch and demo — BENNET
- Publish the Limitless Access Standard draft and the first test kit — CLAUDE, WRITTEN
- Interview one: Jason Becker's plan, recorded with written consent — BENNET

Week 3 — GROW

- Sponsor deck for Line 6, Marshall and DW, built from the sponsor map and the demo — CLAUDE, BENNET SENDS
- Reach out to Andrew from The Ghost Inside about episode two — BENNET

Week 4 — LOCK

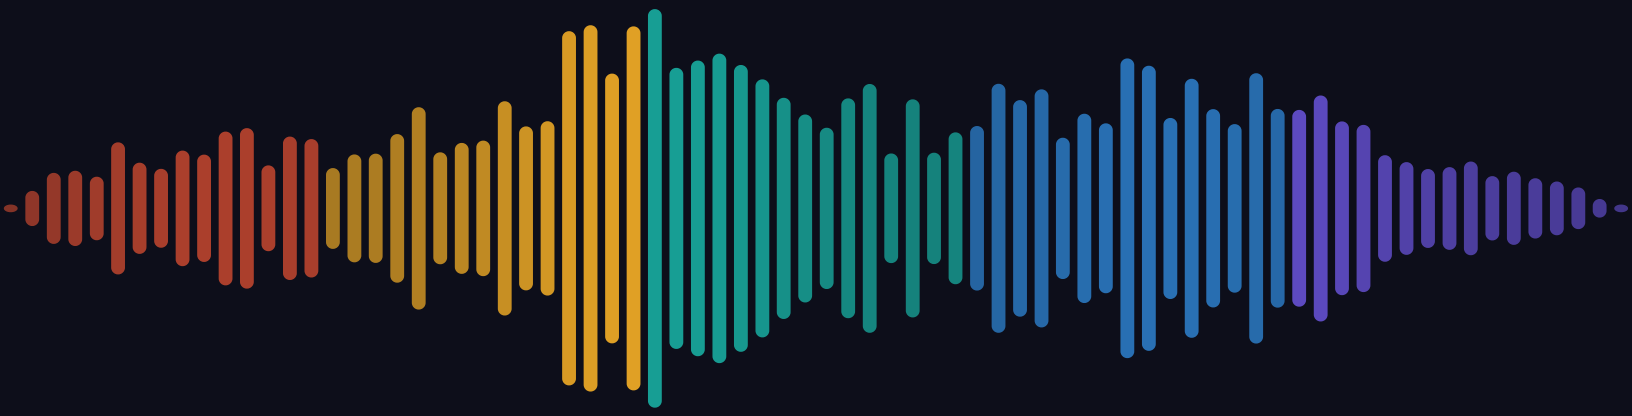

- Lock the pilot date and budget with the first sponsor — BENNET

Asks for Bennet

- ☐ **Set the GitHub default branch to main** so the download rebuilds itself.
- ☐ **Share the Jason Becker plan** so interview one builds on it.
- ☐ **Message Brandon at Kiesel** once the demo is cut.
- ☐ **Name the guitarist who plays with his feet** so we can invite him.

LIMITLESS SOUND

No one left behind.

Free, open software for musicians with disabilities

Mac + Windows
